Warranty

Insurance of possible damage directly caused by the SSL certificate to your users (clients) as a result of the use of such a certificate issued by the negligence of the certification authority.

Wildcard

(* .domain) - SSL certificate securing all subdomains on the main domain. E.g. www.nethost.eu, mail.nethost.eu and anything.nethost.cz (certificate is issued to the *. domain – example for *.nethost.eu).

Domain Validation

(DV) - the easiest way to obtain an SSL certificate. It is verified whether the certificate applicant has the mentioned domain under control.

Organisation Validation

(OV) The certificate contains information about the owner. Includes DV. Verification of the applicant in public databases and telephone verification of the contact.

Extended Validation

(EV) Displays the green address bar, including the company name, in some browser. The highest level of certificate verification. Includes OV. Written verification of the applicant.

Prices without VAT. Installation of a certificate delivered by the customer - CZK 200. Invoicing in € is according to the valid exchange rate on the day of ordering.
